

Determination of species from order Uredinales

Species from order Uredinales (rust) form usually five different spores on two hosts - spermatia, aecidiospores, uredospores, teliospores and basidiospores. The teliospores have different shape, only, the determination is carried out by microscope them.

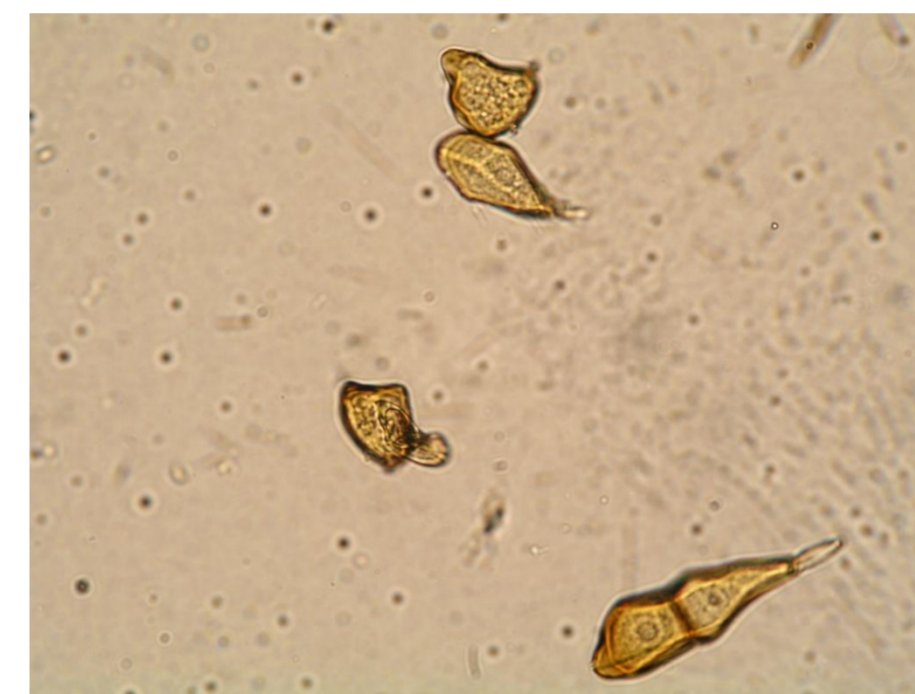

Puccinia graminis

Puccinia hordei

Puccinia coronata

Puccinia sorghi

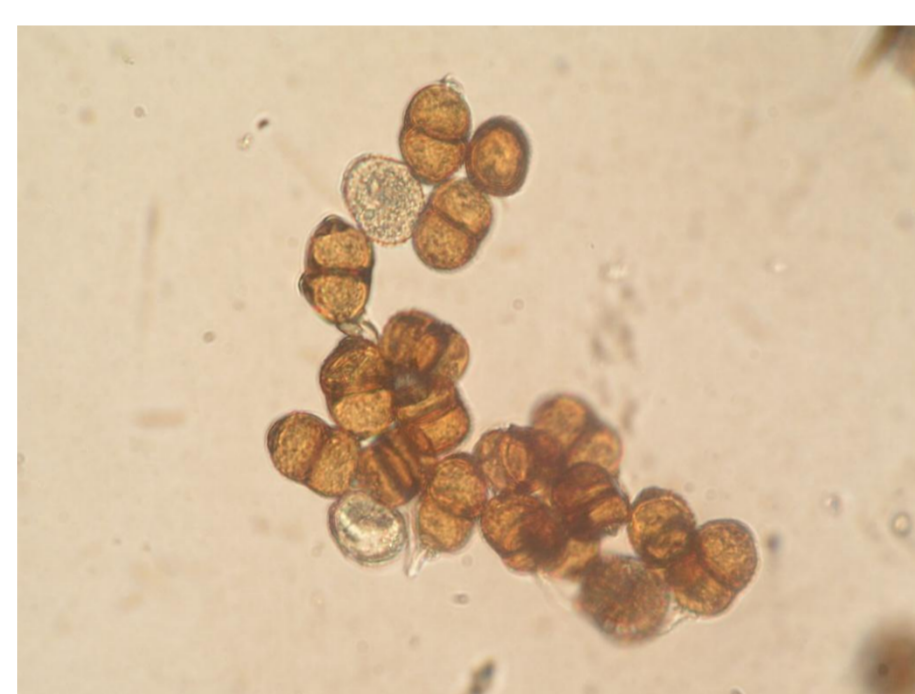

Puccinia helianthi

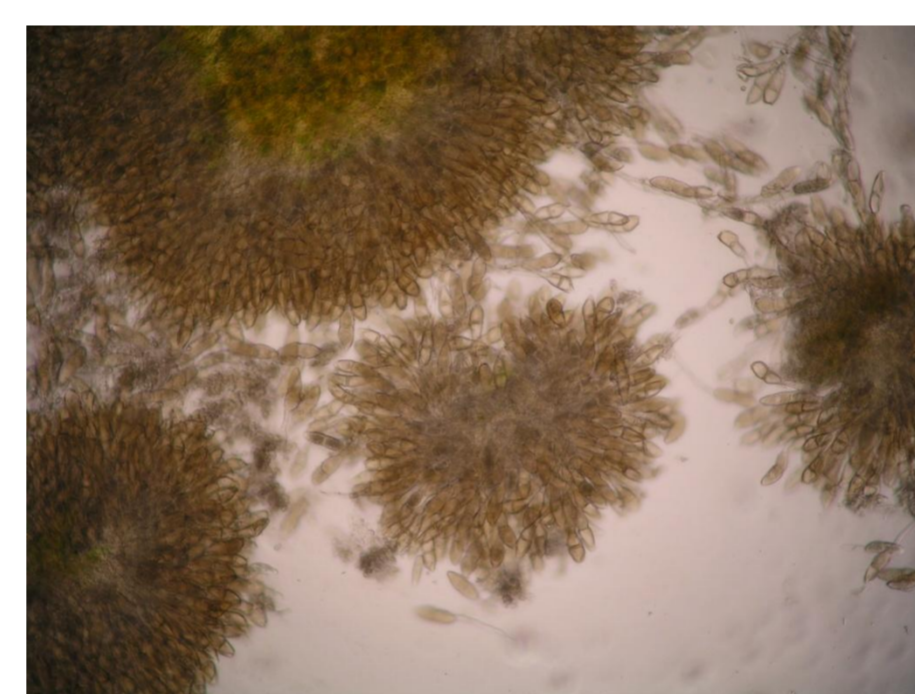

Puccinia carthami

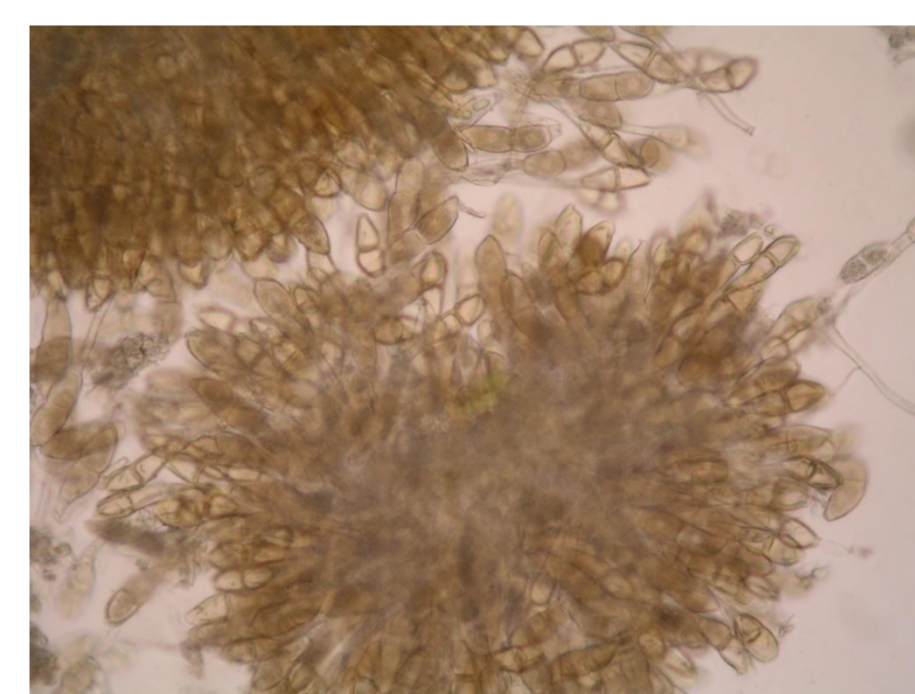

Puccinia menthae

Puccinia malvacearum

Puccinia horiana

Uromyces pisi

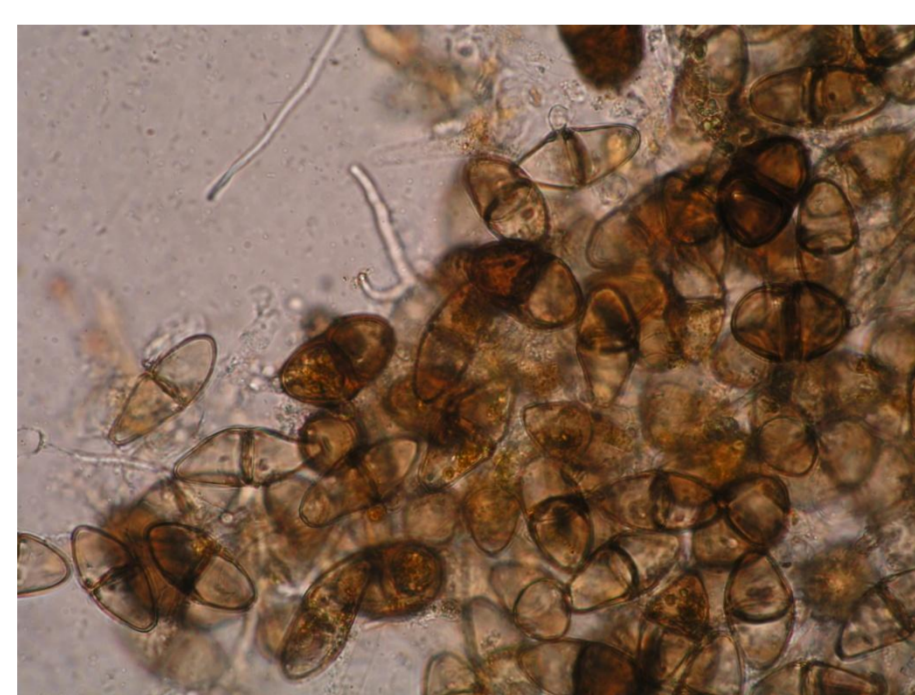

Uromyces fabae

Tranzschelia pruni -spinosa

Gymnosporangium sabinae

Cronartium ribicola

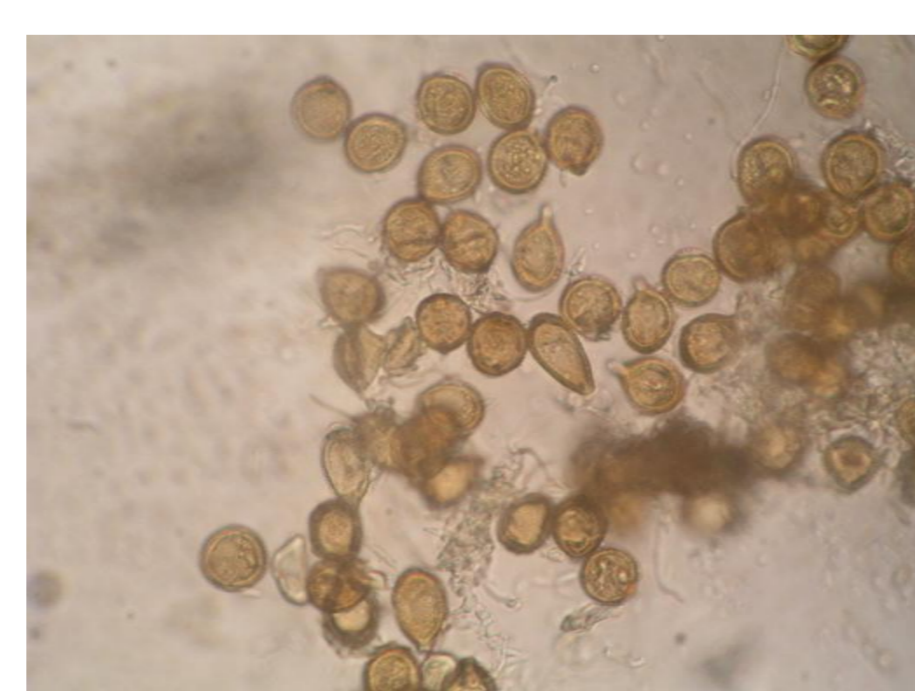

Phragmidium mucronatum

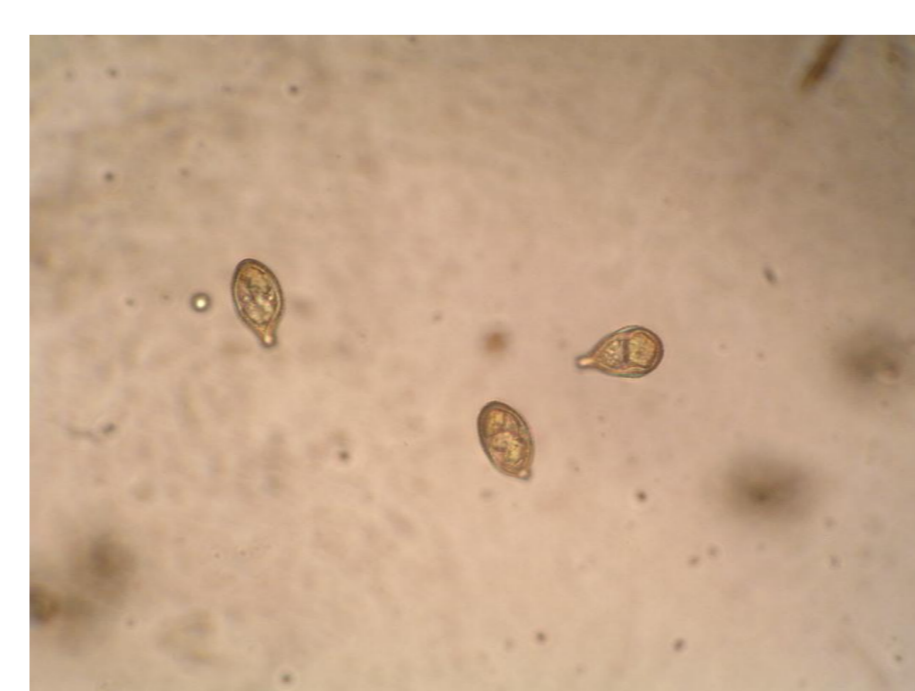

Melampsora allii-populina

Cumminsia mirabilissima

Kuehneola uredinis
